## TITLE

## AQUEOUS ELECTRICALLY DOPED CONDUCTIVE POLYMERS AND POLYMERIC ACID COLLOIDS ABSTRACT

Compositions, methods of making such compositions, are provided. Such compositions are aqueous dispersions including at least one doped conductive polymer and at least one colloid-forming polymeric acid, wherein the electrically doped conducting polymer is doped with at least one non-polymeric organic acid anion, and wherein the conductive polymer is selected from a polythiophene, a polypyrrole, a polyaniline, and combinations thereof. Electronic devices and other applications having at least one layer having at least one such composition are further provided.
